

CE 890 Graduate Seminar

- DATE:** October 8, 2008
- TIME:** 4:00 p.m. (refreshments served at 3:45 p.m.)
- PLACE:** Durland 1052
- SPEAKER:** Stelios Kapsalis, M.S. candidate
- TOPIC:** “Construction and Development in the Small Mediterranean Island of Cyprus”

ABSTRACT

This summer I was working for a company called Demil Co. Ltd in Cyprus. This company is not only an Engineering company but also has a department for waterproofing.

I was able to work in four different projects that were all in different stages in their development. I will talk about my experiences as an engineer for Demil, and I will share some information about how companies develop a project in Cyprus and how big companies work on the construction of their development by hiring sub-contractors. I will talk about the European Union Codes and the engineering software called SP-VAK. In the end I will target two developments that I was mostly responsible for, and some construction methods that we used.
